NOTE.

The Library of the Lyceum is essentially one of Natural History, and to this department of science the entire arrangement of the present Index has been made subordinate. Hence topographies, voyages and travels, biographies, periodicals, &c. which illustrate, even remotely, the natural sciences, are arranged under the first general head of Natural History. Works of a similar character, but which contain nothing relative to the natural sciences, are placed under the head of Miscellanies at the end of the Index. The section Bibliography has been adopted to direct the student to other libraries in which he may find works not in this collection. Authors frequently cause copies of their essays and memoirs to be printed in a separate form, and these have accumulated until it has been deemed advisable to collect and arrange them in a systematic manner. Zoological and other papers have accordingly been bound up in separate volumes, distinguished by the initial letter of the subject. It will be perceived that the arrangement which has been adopted, occasions several repetitions of volumes, and has increased the catalogue to a size disproportionate to the actual number of volumes in the library. This has, however, been considered unimportant, as it is proposed to furnish a useful index rather than a simple catalogue.

The Library of the Lyceum has been in existence but a few years, and depends mainly for its increase upon the liberality of individuals. These donations, together with the names of the donors, are recorded at the end of each volume of the Annals. The collection is therefore very limited in its extent; but the librarian has endeavoured to render it in its present condition as useful as possible to the scientific enquirer.
